●

Intern

Apitic

📍 Lannion - France

  - Conceived and developped an internal issues management system for customer service and developer team
  - The software had to answer the needs of the customer service team who needed an easy to navigate interface in order to take clients' requests with user rights taken into account
  - Doubled as a software issue management system

## SELECTED PROJECTS

- Developer

Developed modules for an adaptation of ZTO's Comscope to phone conversations with the goal of deploying it to call centers by integrating UI / UX designs in collaboration with the team's designer and implemented server side APIs
- Project manager, responsible of internship

  - Conceived and developed an ordering software for specific mall aisles with the collaboration of an intern
  - The project had to be deployed in points of a mall where employees could take customer's orders with offline capabilities and synchronisation
- Project manager

Conceived and developped an internal software to manage Apitic's customers subscriptions, options and billing
